

Ram Caddsys Announces the Launch of BAUTEXT Software – Technical Calculation and Word Processing Software in Asian Countries.

Singapore, 10 March 2009 – Ram Caddsys is pleased to announce the agreement with **Veit Christoph GmbH**, to distribute their **BAUTEXT** Software in Asian Countries.

BauText offers the complete support to an engineer in all of the varied tasks involved in making technical calculations. The program is able **to calculate formulas and tables** automatically beside the usual functions of word processing. Frequently repeated structural verifications, calculations, and text modules are saved as **templates** and retrieved as and when required. If an input value is changed, **BauText immediately recalculates all dependent values**. Even looking up of material values, component values and cross section values from database tables is automated.

The highlights of the program are as follows,

- **Generating** entire technical documentation within a single document
- **Calculating** formulas as well as word processing
- **Supplemented** by an extensive library
- **Other programs** are completely integrated
- **Save 30%** processing time and more

for more information and demo versions you can visit <http://bautext.com/English/index.html> or www.ramcaddsin or write to info@ramcaddsin
